DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-12 , drawn to a semiconductor device, classified in class 257, subclass 303.
- II. Claims 13-20, drawn to a method of making a semiconductor device, classified in class 438, subclass 100+.
- III. Claims 13-24, drawn to a n apparatus for making a semiconductor device, classified in class 118, subclass 100+.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case unpatentability of the group I invention would not necessarily imply unpatentability of the group II invention, since the device of the group I invention could be made by processes materially different from those of group II invention, for example in claim 13, after forming a first dielectric layer forming a capacitor on the first dielectric layer and then forming a second dielectric layer over the first dielectric layer and capacitor instead of forming first and second dielectric layer then forming the capacitor between first and second dielectric layers..

Inventions I and III are related as apparatus and product made. The inventions in this relationship are distinct if either or both of the following can be shown: (1) that the apparatus as

Art Unit: 2811

claimed is not an obvious apparatus for making the product and the apparatus can be used for making a different product or (2) that the product as claimed can be made by another and materially different apparatus (MPEP § 806.05(g)). In the instant case unpatentability of the group I invention would not necessarily imply unpatentability of the group III invention, the apparatus as claimed is not an obvious apparatus for making the device and the apparatus as claimed can be used to make a different device such as a BJT transistor or a ROM or EEPROM transistor.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
